Animal Crossing Lego Advert Design Doc

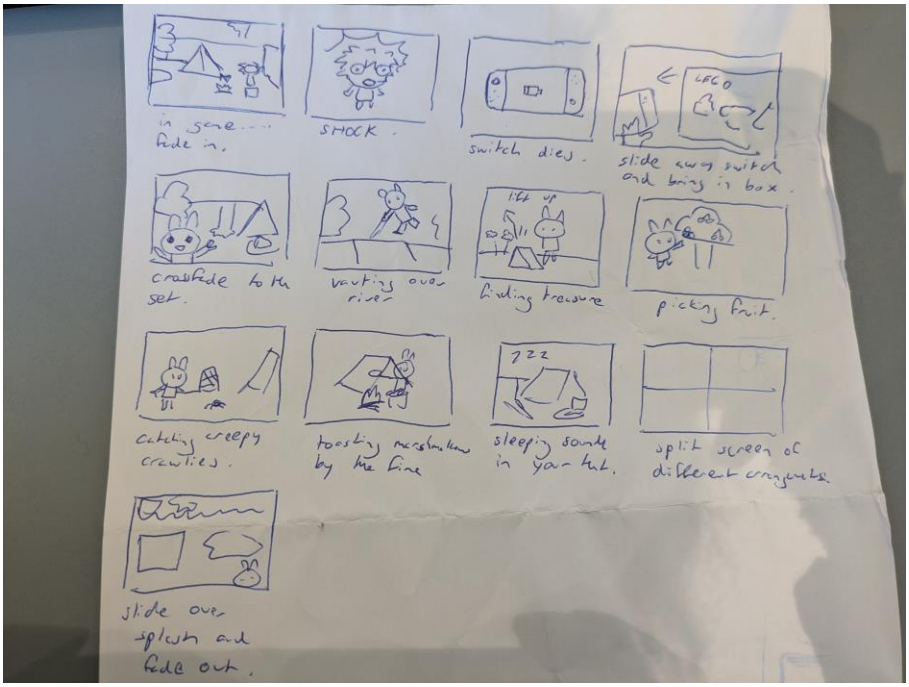
Introduction:

My advert is for an Animal crossing Lego set called “Bunnie’s Outdoor Adventure”. It seeks to show all the creative ways kids can play with the set and show its many unique features. It also aims to encourage animal crossing players to take a break from playing the game to have fun creating and playing with the set.

Purpose:

I made the advert because I’d recently been gifted the Lego set for Christmas and I honestly wanted an excuse to put it together. I also wanted to try my hand at making a little set for it with cardboard and printed out pictures. My target audience was mainly children who would my enamored by the sets many fun features. The main message of the advert is to spend time away from the game to play with Lego!

Storyboarding:



My initial idea included more game footage showing the player doing tasks around the island like catching bugs and crafting in the campsite, however this was cut for time. This was the revised storyboard:

Design Choices:

I looked to the Animal Crossing games for the design of the set and splash art at the end of the advert. My set included the signature animal crossing grass pattern and trees.

The splash art was based on the text boxes from New Horizons. I used the same font as the one used in-game (Rodin Bokutoh Pro) and in a similar color to the game. and included some tools you can use in-game. I also based the design on the box art of the Lego set.

These choices helped the ad feel very on-brand for Animal Crossing.

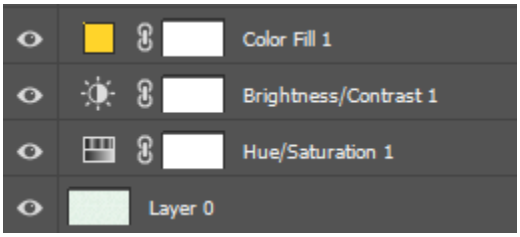
Audio Design:

The tone of the voiceover is friendly and inviting which I felt the target audience would enjoy. It was also on brand for Animal Crossing as the ads for the games use a similar style

of voiceover. I spent a while going through the music tracks from each game to see which one felt right. I landed on the track for 9am in Wild World as it was upbeat and was perfectly timed to my ad, giving it a sense of closure. I left the audio on for my video clips as they provided enough sound effects already which were naturally created when I was recording the video (like the box sliding and Bunnie smacking into a rock after vaulting).

Technical Features:

I used these adjustment layers to create the background for the splash art



I used the crossfade transition and fade in and out to black transitions in the video.

I used the position feature on the splash art so it would slide into frame

Original work:

I recorded the game footage and voiceover, made the set using images from google, recorded the Lego, and created the splash art myself.

Voiceover Script:

discover the charming world of animal crossing away from the screen with the new Lego bunnies outdoor activities playset

spend your days vaulting over the river
finding treasure
picking delicious fruit
catching creepy crawlies
toasting marshmallows by the fire
and sleeping soundly in your tent

Mic and match the set pieces to make your own arrangements

Lego animal crossing playsets available now at your local toy retailer

Challenges:

I had to record my switch dying which involved me recording my switch for 6 mins straight while it was at 1 percent. The first time I was doing it I got impatient and went to turn up the brightness to see if it would drain the battery faster and in that exact moment it died.

I recorded a lot of game footage which would transition to the Lego set but then was kindly informed that the video was only supposed to be 30 seconds and not a minute, so I had to cut them after I had already edited them together.

When I first made the background, it was too small, so I had to remake it by using 4 pieces of paper instead of 2.

Photoshop was very frustrating to edit in as the preview was choppy, and I often didn’t notice mistakes until I had rendered the video. It took a good few attempts before everything was timed correctly.
